Installation Instructions – 3114 Track

1. Purchase appropriate mounting screws and anchors as needed (not provided). Hardware required varies depending on ceiling construction.
2. Cut track to length. Any miter saw or hack saw will easily cut the track. Consider centering the seam if splicing tracks together and be sure each cut is a clean perpendicular cut and any burrs are removed.
3. Identify optimal location to screw track into ceiling. It is preferred to drive mounting screws into ceiling joists, wall studs, or other solid supports. Anchors may be required if mounting directly to sheetrock. Holes should be spaced 12-16 inches apart.
4. Mark screw locations on the track to identify where to drill mounting holes.
5. Using an appropriately sized drill bit, drill holes through the center of the track.
6. Position the track onto the ceiling and mark the location of the holes in the track on ceiling.
7. Drill pilot holes into the ceiling at the locations marked in step #6. Insert anchors if needed.
8. Mount the track to the ceiling by driving screws through the holes in the track.
9. If splicing track sections together for wider spans, align the tracks so that they form a straight line and are abutting one another. Minimize any gap between the tracks. No splicing hardware is required, but alignment is critical.
10. Snap the carriers onto the track with the carrier holes facing towards you.
11. Screw the 3115 end caps onto the ends of the track, positioning the screw to penetrate the face of the track.
12. Snap the snap tape on the curtains into the holes in the carriers.
