Installation Instructions – 4372 Flexible Shower Curtain Kit

1. Cut track to length as need. Any miter saw or hack saw will easily cut the track.

2. To bend track, lay the track on its side over a rounded object (e.g. can or bucket) and wrap the track around the curved surface to achieve the appropriate angle. A minimum 2 inch radius is required for angled bends.

3. Identify optimal location for ceiling brackets. It is preferred to drive mounting screws (not provided) into ceiling joists or solid supports. Anchors (not provided) may be required if mounting directly to drywall ceiling.

4. Mark mounting location and drill pilot holes for mounting screws. Insert anchors if needed.

5. Slide brackets onto the top of the track and mount the brackets to the ceiling using screws (Fig. 1). Space brackets every 12-18 inches. To reduce movement of the track within the bracket, rotate the bracket slightly to lock the track in place.

6. Feed carriers onto the end of the track with one wheel on each side of the center beam support and the loop and shackle hanging down from the track (Fig. 2).

7. Slide end stops onto each end of the track with the body of the end stop resting below the track, and tighten the set screw (Fig. 2).

8. Place pegs of shackles hanging from carries into holes in shower curtain and tighten provided screw into each hole to lock the curtain into place (Fig. 2).
